

Band 7 – Security Analyst

Recruitment role summary and candidate profile

About this role

The Cyber Security Threat intelligence Analyst represents acts as a threat intelligence specialist within the CSOC aimed at analysing and identify potential security threats facing NHS England as identified by the CSOCs threat intelligence collection and analyses capabilities.

The role sits within the CSOCs Threat Intelligence team which is one of the core pillars of the Threat Operations pod within NHS England CSOC. The Threat Intelligence function is comprised of four primary functions:

- **Intelligence Collection & Analysis** – Perform collection, aggregation, analysis and contextualisation of healthcare and security information to produce actionable cyber threat intelligence.
- **Cybersecurity Threat & Risk Assessment** – Perform high-level risk assessments of current and emerging threats to the health & social care estate.
- **Intelligence Dissemination & Reporting** – Produce stakeholder-specific intelligence reporting for internal and external stakeholders.
- **Specialist CTI Support** - Provides specialist Cyber Threat Intelligence (CTI) support to CSOC during high complexity incidents.

About You

You will be a threat intelligence analyst reporting to the threat intelligence senior analyst your **core responsibilities** will be to:

- Interrogate threat intelligence sources to identify items of interest for triage and analysis.
- Collect and process information from threat intelligence sources to aid the identification of potential cyber threats.
- Contextualise and interpret threats via the use of intelligence models and frameworks.
- Accurately identify indicators of compromise within intelligence items as well as potential detection opportunities.
- Carry out investigations into intelligence items of significance, identifying opportunities for further lead development.
- Provide specialist CTI support to protective monitoring teams during high complexity incidents.
- Create intelligence products in the manner most appropriate for the audience, taking care to quote sources and state confidence.

- Contribute to the continuous development of the Threat Operations pod.
- Delivering against CSOC security requirements as directed by senior leadership.
- Lead in-depth CTI investigations.

Professional Competencies

Knowledge, Skills and Qualifications

Essential

Essential

Information Technology (IT) Security Policies (2)

Proven knowledge of IT security policies, standards, and procedures; ability to utilise a variety of administrative skill sets and technical knowledge to ensure cyber security compliance.

Information Security Management (2)

Demonstrable knowledge of the processes, tools and techniques of information security management, ability to deploy and monitor information security systems, as well as detect, resolve and prevent violations of IT security, to protect organisational data.

Digital Forensic Tools (2)

Demonstrable knowledge of and ability to utilize a variety of specific tools for collecting, analysing, and presenting digital-related evidence.

Information Security Operation Centre (ISOC) (2)

Working knowledge of modules, processes and technologies of Information Security Operation Centre (ISOC); ability to detect, response and utilise related platform and applications to perform cyber security initiatives.

Information Security Technologies (2)

Demonstrable knowledge of technologies and technology-based solutions dealing with information security issues; ability to apply these in protecting information security across the organization.

Profession: Cyber Security

Please note, this role profile is an extract taken from the full job description of Security Advisor/Analyst

Computer Forensics (1)

Introductory knowledge of technologies, methods and tools of forensics investigations for IT security violations or potential threats; ability to identify, uncover and evaluate violations, warning reports, suspected incidents and insidious events.

Vulnerabilities Assessment (2)

Demonstrable Knowledge of vulnerability assessment tools, techniques, models, and systems; ability to utilise the knowledge to identify vulnerabilities on network, operating system, mobile application, etc.

Digital Threat Management (2)

Proven knowledge of techniques, approaches and processes of digital threats; ability to detect, monitor, analyse and prevent digital threats.

Endpoint Security (1)

Basic knowledge of concept, issues and techniques of endpoint security; ability to ensure security compliance of endpoint devices in various circumstances.

Data Privacy (1)

Introductory knowledge of and ability to protect an organisation's data to ensure privacy during the process of storage and communication.

Security Information and Event Management (SIEM) (2)

Working knowledge of concept, procedures and processes of Security Information and Event Management (SIEM); ability to utilise related applications to protect organisational networks from cyber risks.

Intrusion Detection and Prevention (2)

Proven knowledge of tools, techniques and processes of intrusion detection and prevention; ability to detect, resolve and prevent intrusion behaviours to protect organisational networks.

In addition, we expect the Post Holder to specialise in one of the following areas:

Computer Network Defence (2)

Working knowledge of methods and processes to monitor, analyse and respond to network attacks, intrusions or any unauthorised actions; ability to use techniques and tools to perform network defence.

Penetration Testing (2)

Demonstrable knowledge of penetration testing concepts, approaches, and tools; ability to find vulnerabilities on network, mobile application, servers, operating system, etc.

Profession: Cyber Security

Please note, this role profile is an extract taken from the full job description of Security Advisor/Analyst

Mobile Security (1)

Basic knowledge of the threats, measures and practices of mobile security; ability to reduce mobile risks and protect personal and organisational data and information.

Information Assurance (1)

Basic knowledge of and the ability to protect information and information systems while ensuring their confidentiality, integrity and availability.

Application Security (2)

Working knowledge of the tools and processes for maintaining application security; ability to design and implement security programs to prevent data loss and access intrusion from web and mobile applications.

Qualifications**Essential**

- Bachelors level degree in Cyber Security or a relevant subject, or equivalent level of experience.
- Evidence of continuous professional development.

In addition, we expect the Post Holder to hold one of the following qualifications or have equivalent experience:

Security Advisor Ops

- CeH
- CompTIA Security+
- CompTIA Network+
- CompTIA CySA+ (Cybersecurity Analyst)
- SANS SEC401

Security Advisor Risk

- N/A

Security Advisor Assurance Delivery

- BCS Data Protection Certificate (Foundation Level)

Profession: Cyber Security
